

The Matchless G15CS Scrambler  
Made in London by men proud of  
their work. A quality machine.

## 3 steps to victory

- 1. Power.** 750cc overhead valve twin. Buckets of torque—for digging out of a sand wash or steaming ahead of traffic. All twins are not alike. Parallel induction, splayed exhaust, means better cooling. Volumetric efficiency. And, let's face it... inches count! Especially when every inch is utilized.
- 2. Handling.** The famous Teledraulic fork, developed in actual competition. The rigid and rugged Matchless frame. Complete with bash-plate.
- 3. Overall readiness.** Reinforced handlebars. Tachometer. Full width *alloy* hubs front and rear. The comfortable saddle. The reliable and slick A.M.C. gearbox. Quick detachable lighting.

You don't, of course, *have* to race a Matchless. But isn't it nice to know that you *could*?

# Matchless
