

for 1951

Model 20
'THE SPRINGTWIN'
498 c.c. O.H.V.

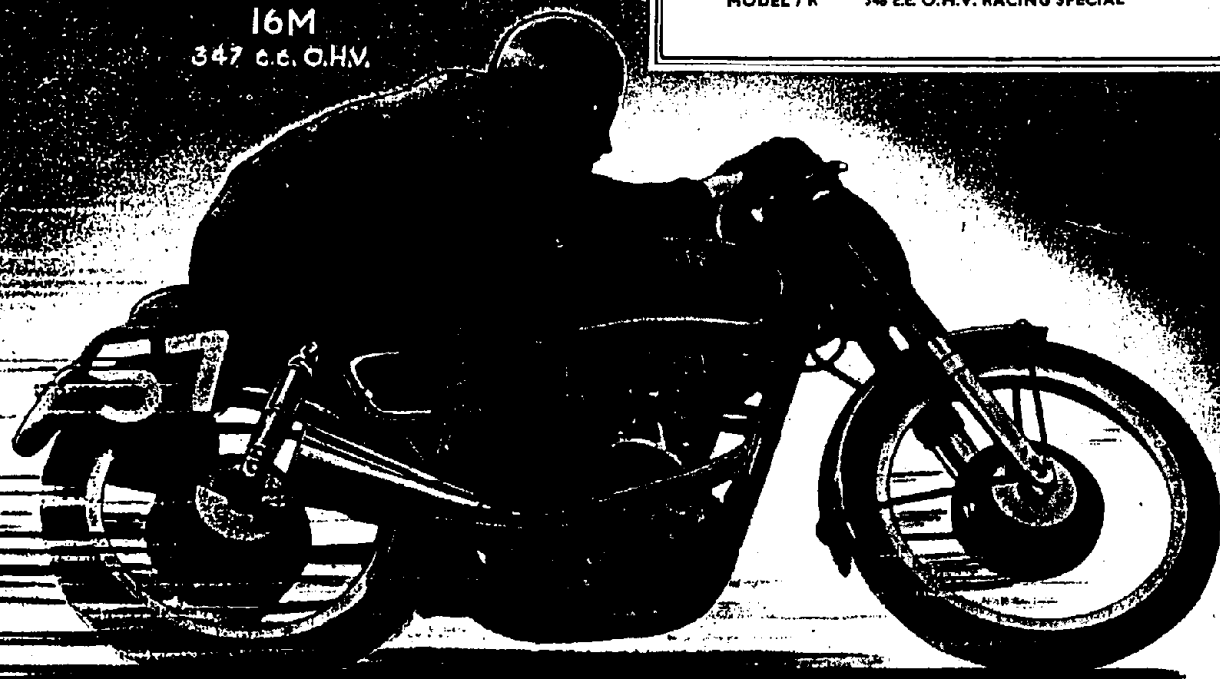

Model
16M
347 c.c. O.H.V.

THE ability of the A.J.S. Design Department to take full advantage of the invaluable data available as a result of many years' active and successful participation in International Trials and Races, has played an important part in maintaining the superiority of A.J.S. Motor Cycles. As a direct result, a considerable increase in performance has been made possible for the 1951 Season without any detrimental effect on mechanical silence or tractability. A.J.S. leadership in design and performance has long been recognised in the Motor Cycle world, and there can be no doubt that this reputation will be still further enhanced by the 1951 Models.
