SERVICE BULLETIN

FRONT FORK SCREWED SLIDER EXTENSION:

To facilitate both removal and assembly of the above part, we have introduced an ingenious 'Articulated' Ring Spanner (Part No. B.4494) as part of our Workshop Tool Kit.

This tool is essential for Front Fork service on 1951 Models, as the two holes in the tubular portion previously used, are now discontinued.

For use, this tool should be applied on the bottom end of the extension adjacent to the threaded portion:

Supplies are now available at a nett figure of -
6s/6d. each.

TOOL FOR ADJUSTING WHEEL HUB BEARINGS (B.3335):

This tool is designed for use on Spring Frame Models, with large rear hub bearings. In design it is identical to Tool B.3334 used for Rigid Frame Models, but larger in size.

For use, the hub lock ring is removed, the tool screws on to the hub, with dogs engaging in slots machined in adjusting cup, providing an accurate and rapid method of adjusting rear wheel bearings:

The cost of this Tool is £1: 6: - nett

20.2.51.
